

Viega Mono Tec Viega Mono Slim

Only 8 cm installation depth.

viega

Award-winning Design for the 8 cm Cistern: Viega Actuating Panels.

A combination of technology and design

With Viega Mono Tec and Viega Mono Slim, Viega offers you a cistern of the highest technical quality, with only 8 cm installation depth. Through the further development of the tried and tested technology, you can choose from the entire range of Visign actuating panels* when designing the bathroom.

Extensive range

With the three Viega design ranges: Visign for More, Visign for Style and Visign for Life, you can arrange your bathroom individually according to your tastes with a multitude of shapes, colours and materials.

Visign for More

Visign for More 100

Metal, stainless steel colours

Visign for More 100 sensitive (230 V)*

TSG**, clear/mint green

Visign for More 101*

TSG**, clear/mint green

Visign for More 102

TSG**, clear/light grey

Visign for More 103

TSG**, parsol/black

Visign for More 104

Metal, chrome-plated

Visign for Style

Visign for Style 10

Plastic, stainless steel colours

Visign for Style 11

Plastic, chrome-plated

Visign for Style 12

Plastic, fine matt/velour-chrome

Visign for Style 13

Plastic, alpine white

Visign for Style 14

Plastic, alpine white

Visign for Life

Visign for Life 1

Plastic, chrome-plated

Visign for Life 2

Plastic, chrome-plated

*When using the actuating panels Visign for More 101 and Visign for More 100 and 103 sensitive with battery operation in combination with the 8 cm cistern, it is necessary that there is at least 5 cm of plaster applied to the front side of the cistern.

** Toughened safety glass.

The products shown here represent a selection. All of the designs and colours can be found in the product catalogue.

Viega Mono Tec and Viega Mono Slim: The fitting solution for every Situation.

No matter what you intend to do – be it a wall-hung WC/-bidet or a simple floor-standing WC – Viega offers you the fitting solution.

Concealed installation Viega Mono Tec-WC and Viega Mono Tec-Bidet.

Pre-wall installation Viega Mono Tec-WC and Viega Mono Tec-Bidet.

Viega Mono Tec-Bidet, 8 cm

- Frame made of galvanized steel with integrated support for wall-hung bidet attachment
- Infinite setting range of the connections

Viega Mono Slim-WC-Cistern, 8 cm (1)

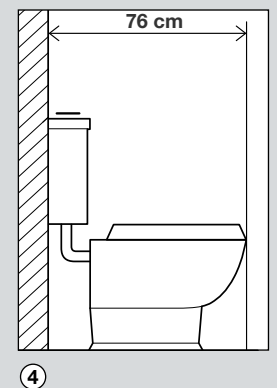

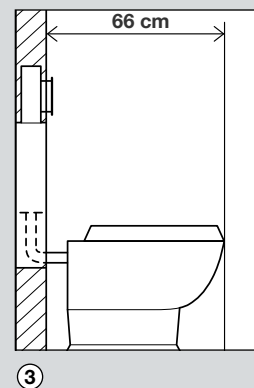

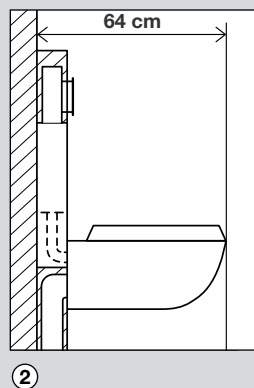

- Simple fastening to the masonry through two lugs
- Insulated flush pipe
- Supplementary vertical adjustable flush pipe (2 cm upwards, 1 cm downwards)

Viega Mono Tec-WC, 8 cm

- Frame made of galvanised steel with integrated support for attachment of wall-hung WC
- Flush pipe
- With connection elbow
- Pre-assembled water pipe
- Version with flush pipe and ventilator connection also available

Even with pre-wall you can save space

In addition to concealed installation, it is possible to position the element Viega Mono Tec in front of the wall (2). The space required is not more than the space used for several traditional installation methods (3 and 4). This solution supports the structure of the wall, provides better noise reduction and more freedom when positioning WCs and bidets.

**The 8 cm cistern from Viega:
Compactly packed technology.**

With the Viega Mono Tec and Viega Mono Slim, Viega offers you familiar Viega technology and Viega quality – compactly packed in only 8 cm.

Completely pre-assembled water pipe

A water pipe is completely pre-assembled in the cistern. The connection from outside takes place via a wall bushing with a 1/2" female thread. For this reason, the cistern can stay closed during the building work.

The connection to an already securely fitted adaptor takes place via a rotatable wall bushing. Important: the corner valve inside must be removed beforehand.

1-piece drain valve (1)

The advantages of this product are not just to be found in the details. The drain valve is 1-piece and can be exchanged as such. A crucial advantage during assembly and maintenance, as no pieces can fall into the cistern.

9 l flush volume with only 8 cm depth

Despite the minimal installation depth of 8 cm, Viega Mono Tec and Viega Mono Slim cisterns are convincing due to their maximum flushing volume of 9 litres. With the help of the dual volume flushing technology, there is a choice of a short flush, adjustable between 3 and 4 litres, and a full flush, infinitely adjustable between 6 and 9 litres. The factory settings are flush volumes of 3 and 6 litres for short and full flush respectively.

Bowden wire technology (2)

With Bowden wire technology, Viega actuating panels can also be mounted on the 8 cm cistern. To enable this, the Bowden wire unit only has to be set to the 8 cm size: unlock the mechanism, push the unit together, re-lock the mechanism, and push the unit onto the drain valve.

1-piece inspection duct

The 1-piece inspection duct prevents dirt entering the cistern – not only during cladding, but also during the tiling work. The inspection duct is shortened accordingly for the assembly of the actuating panel.

Wall bushing
A simple assembly from outside via the universal 1/2" female thread.

1 piece construction duct
Protection against dirt on the building site.
