

viega

It's the attention to detail that makes life so enjoyable. Visign von Viega.

C

viega

When do you rendezvous with perfection? Every day – with Visign.

Can a purely functional product be newly defined? Definitely. Viega has impressively proved this with the “Visign” series actuating panels. Design takes centre stage here – extravagant, simple and with all the freedom imaginable to accentuate individual styling for the bathroom. What is the secret? More comfort than ever before.

Visign for More.

Visign for More reveals the unmistakable influence of design features from architecture and modern minimalist styling. It's not just the look; you will also love the technology with extremely soft and short stroke lengths and maximum reliability.

Visign for Style.

Aesthetic design should apply down to the last detail – especially if pure styling complements perfect technology. That's exactly the idea of Visign for Style. Beauty of form and understated design – the perfect partner for an existing bathroom ensemble.

But why should bathroom design finish here? Visign for More.

What you see is a breathtakingly flat actuating panel – clear graphic design, strictly minimalist and with elegant styling. The floating optic creates a look of unequalled lightness. High-quality materials such as metal and glass in exquisitely harmonized colours create pioneering design highlights. And winning numerous internationally recognized design awards.

What you feel is exactly that lightness that comes with a floating look. A new kind of rocker technology allows the actuation of the resource-saving dual-flush technology. The high quality surface convinces with pleasing haptic and optimal hygiene.

The actuation of the new Visign for More sensitive is entirely without contact: a gentle glide of the hand suffices to actuate the flush in either small or large flush volumes.

See catalogue for further colours.

Visign for More.

A modern bathroom vanity with a black grid-patterned countertop and a white bathtub. The vanity is set against a red wall. A white bottle is on the countertop. The floor is grey tile. A white toilet is visible in the foreground.

Every great design concept needs to be convincing down to the last detail.

A photograph of a bathroom wall covered in small, square mosaic tiles in various shades of blue, green, and yellow. Two white, rectangular flush valves with horizontal slots are mounted on the wall. In the foreground, the top of a white toilet is visible on the left, and the top of a white bidet is visible on the right. The lighting is bright, and the overall aesthetic is clean and modern.

Thinking about beautifully designed interfaces is the name of the game. Visign for Style.

The perfect synthesis of functionality and design is striking at first sight. The ideal combination is modern ceramics and designer fittings. Visign for Style with clear and distinct lines is elegant and understated. But the aesthetic design of the actuating panel fulfils its unique function as an interface that puts humans in touch with technology. It's just one more reference to technical competence.

Be surprised by the new, extremely light touch. That's thanks to the impact of the newly developed rocker technology. Visign for Style reveals sensitive styling that's obvious from the very first point of contact. And the visual impact is second to none.

Visign for Style.

See catalogue for further colours.

Purism can also have playful design elements.

1. Mounting frame for WC and urinal flush with the tiles

2. Visign for Style 12 TSG, tile-level

3. Function unit for natural stone

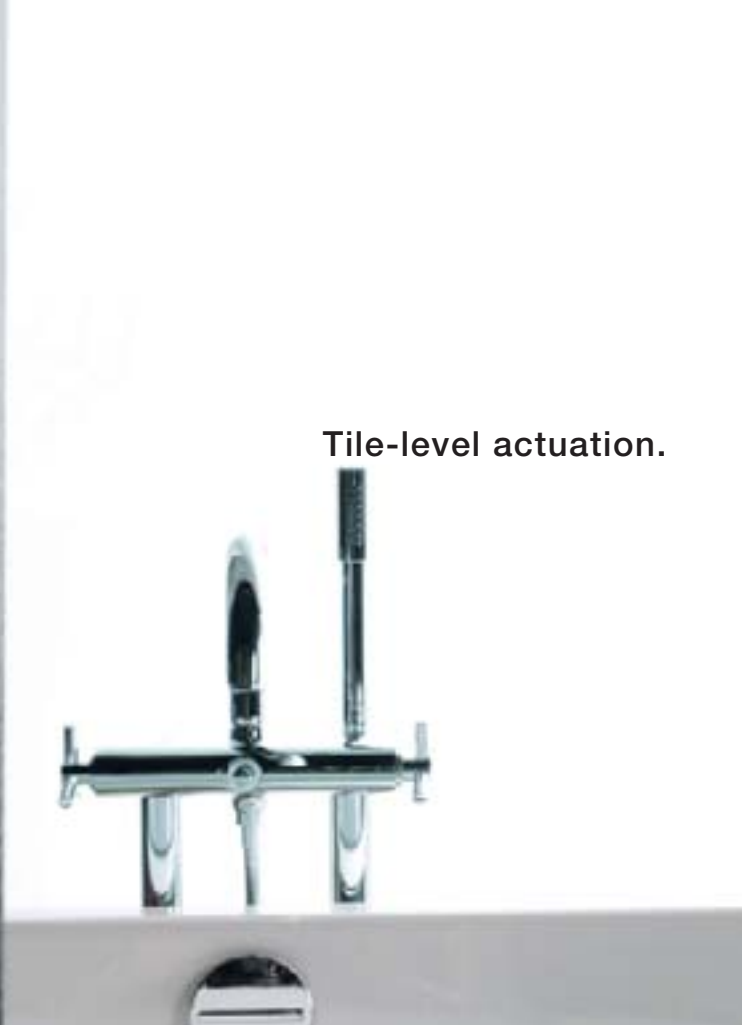

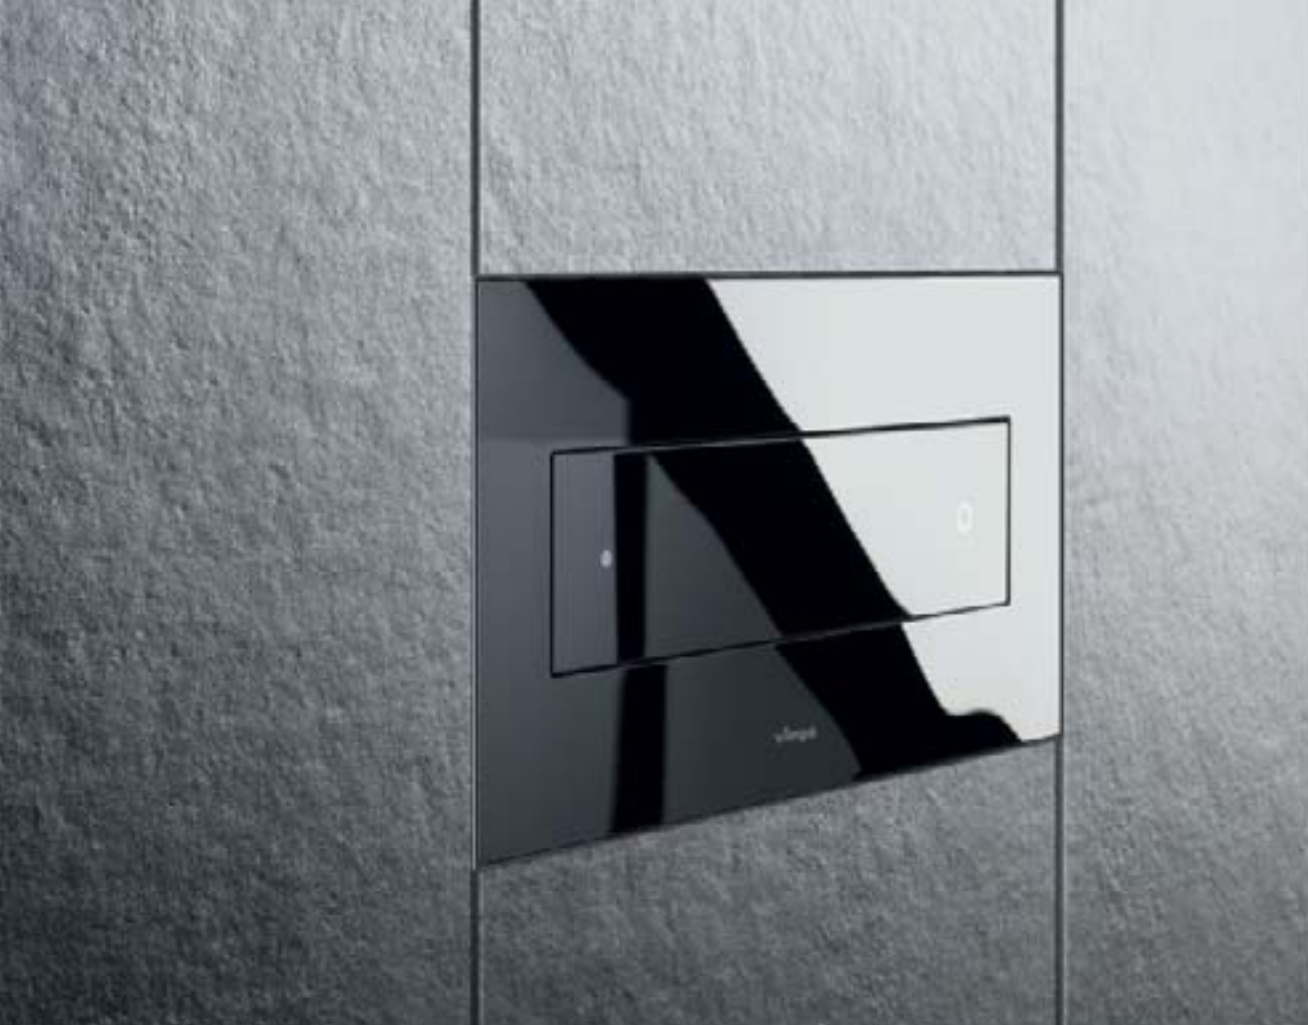

Ultra elegant styling in bathroom design is the tile-level installation of the actuating panel. The Viega Visign collection offers you 3 alternative concepts for pre-wall systems Viegaswift, Steptec and Viega Eco Plus.

1. Visign for Style and Visign for More. Combined with the corresponding mounting frames, these classical designs can also be installed flush with the tiles. Please note: only certain actuating panels are suitable for installation flush with the tiles.

2. Visign for Style 12 in toughened safety glass, tile-level. Available in the colours TSG clear/light grey, TSG parsol/black and TSG clear/mint green.

3. Minimalist design in natural stone. The stone panel is cut on site and glued to the function unit. When fitted into the installation set, it remains almost invisible and creates a continuous surface with your natural stone or tile pattern.

An extensive framework for good design.

Tile-level actuation.

It really is here: surprising lightness for overall assembly. Viega Steptec.

Back to maximum results – that's the idea of this extremely flexible pre-wall installation system. Steptec functions like a modular system: rails and profiles build the basis of the assembly. It is possible to do almost anything with this: a clever solution with a non-full-height partition or an architecturally refined bathroom design with a room-height partition. Fire- and sound proofing are guaranteed.

A simple calculation suffices to calculate the required material: you calculate breadth x height of the surface to be clad and you have the complete package. Then multiply the result in m^2 with the rail factor. In that way, you find out how many metres of rails are required – your basis to get started. Let your imagination take control and we will supply the right materials. Steptec.

Solid basis for cost-effective building. Viega Eco Plus.

Choose Viega Eco Plus for the intelligent and practical solution. With its excellent cost and performance results, it's the only system for all types of pre-wall installation and ideally designed for project business.

Thanks to integrated alignment help it can be easily used in dry construction and even has a specialist handy for the smallest of spaces: the Viega Eco Plus corner element with a number of fixing possibilities.

**Easily adjustable for all
height requirements.
Viega Mono.**

It's the perfect solution for wet construction. A pre-wall block for cladding in and around that is so flexible that it makes a second superfluous. Be it 1130 or 980 mm construction height, the Viega Mono is suitable for everything – simply by shortening the frame at the pre-determined point. The connection to the masonry is secure and seamless thanks to integrated brickwork pockets.

The robustly structured surface of its EPS casing not only acts as a perfect base for plaster, it is also the perfect frame for the Viega concealed cistern Visign 2.

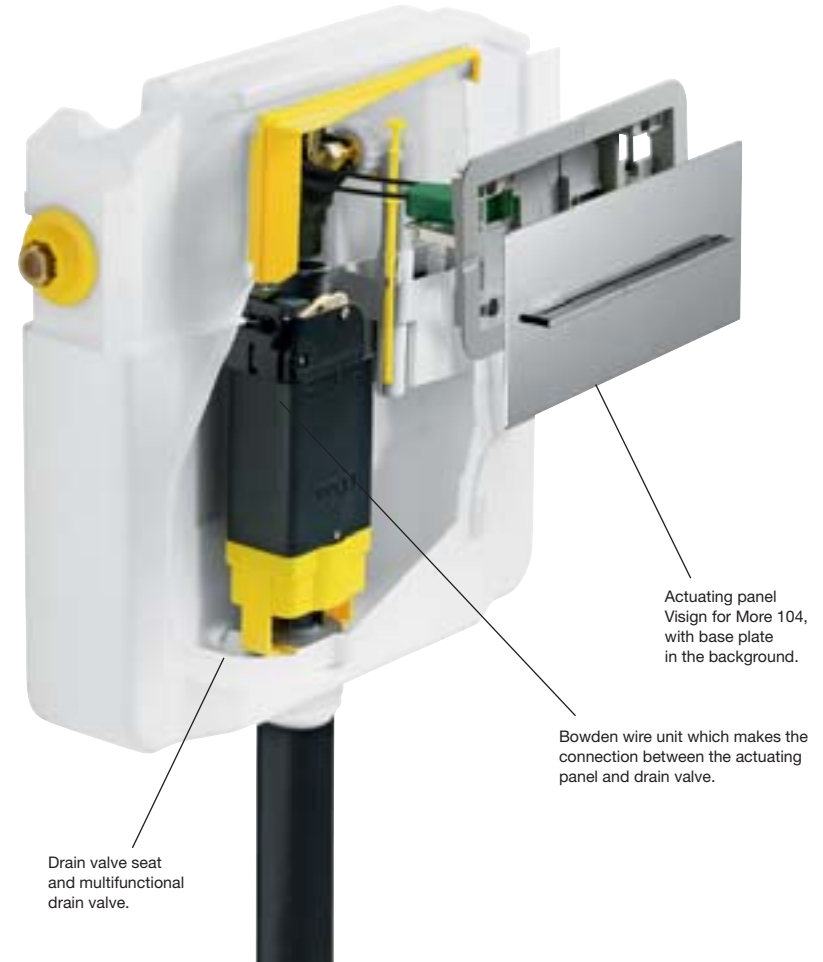

Viega concealed cistern Visign 2: Compactly packed technology.

Just the push of a button on the aesthetic and attractive Viega Visign control element already suffices as a convincing show of the quality of concealed cistern. State of the art cistern technology: with multifunctional drain valve, integrated filling hose fitting and optimized fixing technology for the actuating panel.

Eco- and cost-conscious water usage is easy and always guaranteed thanks to ultra modern dual volume flush mechanism. Full volume can be set between 6 and 9 litres continuously, and small flush volumes can be set between 3–4 litres. Numerous advantages also include the pre-installed water pipe from corner valve to the filling valve – a factor saving time and money. And another plus: thanks to their longevity, the cisterns are a safe investment.

Viega concealed cistern Visign 2 can be combined with all Viega actuating panels.
